

STUDENT ENROLLMENT & COURSE MANAGEMENT SYSTEM

1. BRAINSTORMING & IDEATION

1.1 Problem Identification

Traditional farm management often depends on handwritten registers, paper files and separate spreadsheets. This can result in incomplete or incorrect information, delayed reporting, difficulty tracking crop activities and uncertainty for buyers. The project identifies the need for a centralized digital system that can organize farmer, farm, crop and buyer information.

1.2 Problem Statements1.2 Problem Statements

ID	Target User	Problem Statement
PS-1	Student	The student wants to enroll in courses and view course details, but manual enrollment processes can be time-consuming and may cause errors or confusion.
PS-2	Administrator	The administrator wants to manage student records and course information, but maintaining records manually can lead to duplicate entries, missing data, and difficulty in updating information.
PS-3	Faculty / Instructor	The faculty member wants to view enrolled students and manage course-related information, but scattered records can make tracking student enrollment and course details difficult.
PS-4	System Administrator	The System Administrator wants to manage user access and maintain system security, but manual access control can create risks of unauthorized access and data misuse.

- Target User Farm Managers

- Student Buyers
- Administrator
- Faculty / Instructor
- System Administrators

1.4 Empathy Map

Empathy Area	Student Enrollment & Course Management System Understanding
Think & Feel	Users need accurate, timely, and easily accessible student and course information.
Hear	Users receive instructions, feedback, and guidance from faculty members, academic coordinators, and administrators.
See	Users currently see admission forms, paper records, spreadsheets, and manual enrollment processes.
Say & Do	Students enroll in courses, submit details, and check enrollment status, while administrators maintain student and course records.
Pain	Data-entry errors, duplicate records, enrollment delays, difficulty updating information, and time-consuming report preparation.
Gain	Automated enrollment, centralized student records, faster course management, reduced errors, and improved accessibility.

1.5 User Needs

- Students need to register and create their accounts easily.
- Students need to view available courses and course details.
- Students need to enroll in their preferred courses.
- Students need to check their enrollment status.
- Administrators need to manage student records and personal information.

1.6 Pain Points

- Manual student enrollment is time-consuming and difficult to manage.
- Maintaining student records using paper files can lead to data loss.
- Incorrect data entry may create errors in student information.
- Duplicate student records can cause confusion.
- Students may face delays in receiving enrollment confirmation.

1.7 Selected Idea

Student Enrollment & Course Management System

The selected idea is to develop a web-based Student Enrollment & Course Management System that simplifies student registration, course enrollment, and academic record management.

1.8 Objective of the Idea

- To develop a user-friendly system for student registration and course enrollment.
- To automate the student enrollment process and reduce manual work.
- To maintain accurate and centralized student records.
- To simplify course creation, updating, and management.
- To provide students with easy access to course details and enrollment status.

1.9 Expected Outcome

- A user-friendly web-based Student Enrollment & Course Management System.
- Faster and easier student registration and course enrollment.
- Accurate and centralized storage of student records.
- Reduced manual paperwork and data-entry errors.
- Efficient management of course details and enrollment records.
