

STUDENT ENROLLMENT & COURSE MANAGEMENT SYSTEM

5. PROJECT DEVELOPMENT PHASE

5.1 Development Environment

The Student Enrollment & Course Management System is developed using a web-based development environment. The frontend provides an interface for students, faculty, and administrators, while the backend handles application logic and database operations. The development environment includes Visual Studio Code for coding, Python Flask for backend development, MySQL for database management, and Google Chrome for testing the application..

5.2 Custom Objects

Object	Record Name	Purpose
Student	Student Name (Text)	Stores student details, contact information, and academic records.
Course	Course Name (Text)	Stores course details such as duration, fees, and availability.
Enrollment	Enrollment ID (Auto Number)	Maintains student course enrollment details, enrollment date, and status.
Faculty	Faculty Name (Text)	Stores faculty identity, contact information, and assigned courses.
User	User Name (Text)	Stores user login details, roles, and access permissions.

5.3 Farm Object Fields

Field	Type / Values
Student Name	Text
Student ID	Auto Number
Email	Email
Phone Number	Phone
Gender	Picklist: Male, Female, Other
Date of Birth	Date
Address	Long Text Area

Department	Text
Year of Study	Picklist: 1st Year, 2nd Year, 3rd Year
Course	Lookup Relationship with Course
Enrollment Status	Picklist: Pending, Enrolled, Completed, Cancelled

5.4 Crop Object Fields

Field	Type / Values
Course Name	Text
Course ID	Auto Number
Course Code	Text
Course Description	Long Text Area
Duration	Text
Course Fees	Currency
Course Type	Picklist: Undergraduate, Postgraduate, Diploma
Department	Text
Course Availability	Picklist: Available, Full, Closed

5.5 Farmer Object Fields

Field	Type / Values
Faculty Name	Text
Faculty ID	Auto Number
Email	Email
Phone Number	Phone
Gender	Picklist: Male, Female, Other
Department	Text
Qualification	Text
Experience	Number
Assigned Course	Lookup Relationship with Course
Employment Status	Picklist: Active, Inactive

5.6 Buyer Object Fields

Field	Type / Values
Enrollment ID	Auto Number
Student	Master-Detail Relationship with Student
Course	Lookup Relationship with Course

Enrollment Date	Date
Enrollment Status	Picklist: Pending, Approved, Rejected, Completed
Payment Status	Picklist: Paid, Unpaid, Partial
Payment Amount	Currency
Remarks	Long Text Area
Field	Type / Values

5.7 Lightning App

The Student Enrollment & Course Management System Lightning App provides a centralized interface to manage student records, courses, faculty details, and enrollment information. It enables easy navigation, efficient data management, and quick access to important academic information.

5.8 Security and Access Configuration

The Student Enrollment & Course Management System uses secure login and role-based access control to protect student and course information. Students can view and manage their profiles and enrollments, faculty can access assigned course details, and administrators can manage all records and system settings. This ensures data privacy, security, and controlled access.

5.9 Development Summary

The Student Enrollment & Course Management System was developed to simplify student registration, course management, and enrollment activities. The system provides centralized student records, course information, secure user access, and enrollment tracking. It reduces manual paperwork, minimizes data-entry errors, and improves the efficiency of academic administration.
